

PHT's Integrated Product Suite

Delivering complete electronic patient reported outcome (ePRO) solutions

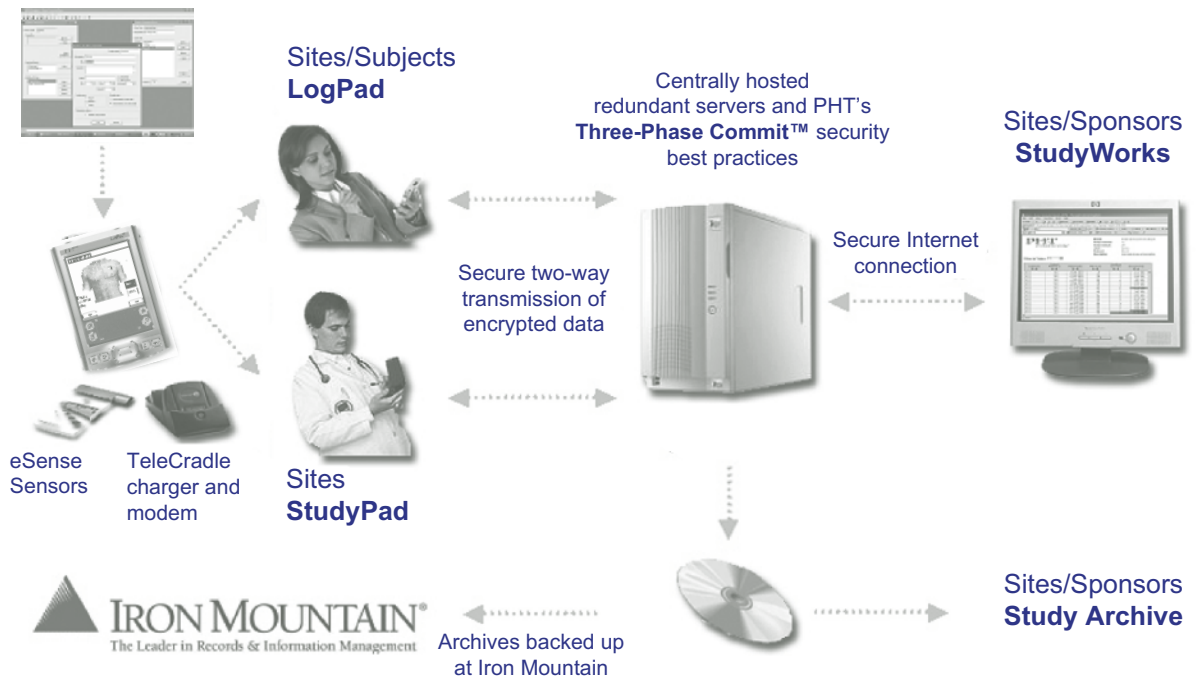

PHT's market-leading integrated **Product Suite** enables an end-to-end ePRO solution, from eDiary design and deployment to help desk support and full study data archiving. Our products include:

	Intended Users	PHT Solution	Benefits
 LogPad® System	Individual study subjects	Analog and wireless electronic patient diaries implemented on handheld devices	Improve data quality and reduce variance. Minimize data loss. Receive only complete, legible and logical subject diary reports
 StudyPad® System	Site coordinators	Single device solution for mobile data capture at sites	Enhance site efficiencies by collecting data from many patients on one portable device
 eSense™ Sensors	Individual study subjects	Wirelessly integrated measurement devices (e.g. spirometers, glucometers, activity monitors)	Ask new questions and collect high-quality objective physiological data in conjunction with subjective eDiary reports
 StudyWorks™	Site coordinators and study sponsors	Online portal that provides real-time access to study and subject data (permission-based)	Streamline trial management processes. Reduce the time from ePRO data collection to analysis. Manage subject compliance and enrollment proactively
 ePRO Designer™	PHT engineers. Also available to study sponsors through Technology Transfer	Intuitive application for rapid eDiary design	Increase control of the trial and leverage PHT best practices to reduce time and expense of eDiary design
 Study Archive	Study sponsors and investigator sites	The industry's only XML source archive. Delivered on permission-based CD-Roms	Retain all study data for reconstruction years after the trial with a best-in-class XML-based study archive

PHT Product Suite

PHT's ePRO products and processes are compliant with EU Directives and FDA Guidelines and Regulations including 21 CFR Part 11.

ePRO Designer

The process begins with ePRO Designer, which helps PHT and sponsors quickly develop effective protocol-specific eDiaries. The diaries are then deployed onto handheld analog or wireless devices that can be integrated with LogPad Sensors. LogPads and StudyPads are used by subjects at home and at sites to record their experiences firsthand. The data is sent to a secure central server where it is instantly available for real-time review. Upon study closeout, PHT produces an XML source data archive that is backed up at Iron Mountain for additional security.

PHT Services Optimize the Product Suite Value

PHT's standard services include protocol-specific diary design, device production and distribution, logistics management, comprehensive training of sites and subjects, 24x7 multi-lingual internal study support, data collection and transmission, real-time data access and hosting, and full study archiving upon trial completion. Scientific consulting is also available.

The PHT Integrated Product Suite Experience

Subjects, sites and sponsors report positive experiences using PHT's integrated Product Suite. PHT's ePRO systems enable better scientific conclusions and shorten trial timelines by improving data quality, reducing variance and sample size, streamlining site coordinator processes, and providing real-time access to data. FDA and other regulatory authorities have approved new drug applications that include endpoint data collected using PHT's Product Suite. PHT's trial experience and expertise includes a wide variety of therapeutic areas, indications, subject demographics and clinical site locations around the world.
